

For the attention of Rabai Power and Rabai Operation & Maintenance Stakeholders

Rabai Power set a new generation record in July 2017, reaching 99.0 % capacity factor and a generation of 66,308 MWh, beating the old record from May 2014 of 97% capacity factor.

Dispatch was only affected by minor planned maintenance, regular turbo charger wash and very small repairs fixed by the operators on duty.

Despite the plant being in its 8th year of operation, with its 6 generation units, it is still possible to push generation slightly beyond 100% (30th July 101%) which was also confirmed by the annual contractual capacity test in May when generation of 91.65 MW was achieved against a contracted capacity of 90 MW.

Columns below showing daily dispatch during July 2017

Yours faithfully
For Rabai Power Limited

Lars Olesen
General Manager
